# INDEX

1. Unit tests [Functional Testing]	----- 2
2. Server Tests [Functional Testing]	-----42
3. Usability Tests [Non-functional Testing]	-----57
4. Load Tests [Non-functional Testing]	-----72
5. GUI Tests [Non-functional Testing]	-----89

# 1. Unit Tests [Functional Testing]

1.

<b>Test scenario ID</b>	Unit Test	<b>Test case ID</b>	TU01
<b>Test case description</b>	To verify if new person's entry is created in the proper format	<b>Test priority</b>	High
<b>Prerequisite</b>	The entry should be already existing	<b>Post-requirement</b>	NA
<b>Test Procedure</b>		1. Create a new entry using model class 2. Using the Assert function to verify if the entry created is stored in the right format	
<b>Input</b>		Data should be according to the data type of the column	
<b>Expected Result</b>		Pass/Fail based on the conditions	
<b>Actual Result</b>			
<b>Status</b>			
<b>Remarks</b>			
<b>Created By</b>		Hardik Rana	
<b>Date of creation</b>			
<b>Executed By</b>			
<b>Date of Execution</b>			

## 2.

<b>Test scenario ID</b>	Unit Test	<b>Test case ID</b>	TU02
<b>Test case description</b>	To verify if entry for new photo is created	<b>Test priority</b>	High
<b>Prerequisite</b>	For test case to pass the photo entry must already exist	<b>Post-requirement</b>	NA
<b>Test Procedure</b>		1. Create a new entry by providing image data 2.Using the url builder creating the url for the new image entry 3. Compare the expected url with the generated url	
<b>Input</b>		Image name	
<b>Expected Result</b>		Pass/Fail based on the conditions	
<b>Actual Result</b>			
<b>Status</b>			
<b>Remarks</b>			
<b>Created By</b>		Hardik Rana	
<b>Date of creation</b>			
<b>Executed By</b>			
<b>Date of Execution</b>			

## 3.

<b>Test scenario ID</b>	Unit Test	<b>Test case ID</b>	TU03
<b>Test case description</b>	To verify the entry for person search (full text search) is created or not	<b>Test priority</b>	High
<b>Prerequisite</b>	For test case to pass the person search entry must already exist [or we can create one]	<b>Post-requirement</b>	NA
<b>Test Procedure</b>		1.Create a new search person entry using model person class 2.Using the Assert function to verify if we can search for the entry created based on different functions in the full_text_search file	
<b>Input</b>		Person's given name,family_name,entry_date etc..	
<b>Expected Result</b>		Pass/Fail based on the conditions	
<b>Actual Result</b>			
<b>Status</b>			
<b>Remarks</b>			
<b>Created By</b>		Hardik Rana	
<b>Date of creation</b>			
<b>Executed By</b>			
<b>Date of Execution</b>			

## 4.

<b>Test scenario ID</b>	Unit Test	<b>Test case ID</b>	TU04
<b>Test case description</b>	To verify the entry for person search which is created in test case 3 can be deleted or not	<b>Test priority</b>	High
<b>Prerequisite</b>	For test case to pass the person search entry must already exist [or we can create one]	<b>Post-requirement</b>	NA
<b>Test Procedure</b>		1.Create a new search person entry using model person class [if not already exists] 2. Delete the created entry using functions of full_text_search file. 3.Using the Assert function to verify if entry is deleted or not [by searching for that entry in database]	
<b>Input</b>		Person's given name, family_name,entry_date etc..	
<b>Expected Result</b>		Pass/Fail based on the conditions	
<b>Actual Result</b>			
<b>Status</b>			
<b>Remarks</b>			
<b>Created By</b>		Hardik Rana	
<b>Date of creation</b>			
<b>Executed By</b>			
<b>Date of Execution</b>			

## 5.

<b>Test scenario ID</b>	Unit Test	<b>Test case ID</b>	TU05
<b>Test case description</b>	To verify that various constants which are set in const.py file are matching with the pfif (person finder interchange format) or not	<b>Test priority</b>	High
<b>Prerequisite</b>	NA	<b>Post-requirement</b>	NA
<b>Test Procedure</b>		1. Get various constants which are set in const.py file. 2.Using the Assert function to verify if this constants are matching with the pfif constants or not.	
<b>Input</b>		Constants which are set in const.py file	
<b>Expected Result</b>		Pass/Fail based on the conditions	
<b>Actual Result</b>			
<b>Status</b>			
<b>Remarks</b>			
<b>Created By</b>		Hardik Rana	
<b>Date of creation</b>			
<b>Executed By</b>			
<b>Date of Execution</b>			

## 6.

<b>Test scenario ID</b>	Unit Test	<b>Test case ID</b>	TU06
<b>Test case description</b>	To verify the format in which date is stored	<b>Test priority</b>	High
<b>Prerequisite</b>	The entry should be already existing	<b>Post-requirement</b>	NA
<b>Test Procedure</b>		1. Create a new date entry using datetime library of python 2. Using Assert function verify if the format of date stored is correct 3. We can also check if it raises different value error or exception when the date is not in given format.	
<b>Input</b>		A valid date	
<b>Expected Result</b>		Pass/Fail based on the conditions	
<b>Actual Result</b>			
<b>Status</b>			
<b>Remarks</b>			
<b>Created By</b>		Hardik Rana	
<b>Date of creation</b>			
<b>Executed By</b>			
<b>Date of Execution</b>			

## 7.

<b>Test scenario ID</b>	Unit Test	<b>Test case ID</b>	TU07
<b>Test case description</b>	To verify if normalise function(it converts all string in set to lowercase) is working	<b>Test priority</b>	High
<b>Prerequisite</b>	Set of predefined bad words should be created [With the SpamDetector class]	<b>Post-requirement</b>	NA
<b>Test Procedure</b>		1. Make an entry to the set using uppercase strings. 2. Use Assert function to check if the uppercase of the input string has been converted to lowercase	
<b>Input</b>		Set of words	
<b>Expected Result</b>		Pass/Fail based on the conditions	
<b>Actual Result</b>			
<b>Status</b>			
<b>Remarks</b>			
<b>Created By</b>		Hardik Rana	
<b>Date of creation</b>			
<b>Executed By</b>			
<b>Date of Execution</b>			

## 8.

<b>Test scenario ID</b>	Unit Test	<b>Test case ID</b>	TU08
<b>Test case description</b>	To verify if bad words and spam is detected [Input text is None or it contains comma in-between which is not needed]	<b>Test priority</b>	High
<b>Prerequisite</b>	Set of predefined bad words should be created [With the Spam-Detector class]	<b>Post-requirement</b>	NA
<b>Test Procedure</b>		1. Use Assert function with the predefined bad words and check if their spam probability calculated by the function matches with that of the expected probability	
<b>Input</b>		Valid string	
<b>Expected Result</b>		Pass/Fail based on the conditions	
<b>Actual Result</b>			
<b>Status</b>			
<b>Remarks</b>			
<b>Created By</b>		Hardik Rana	
<b>Date of creation</b>			
<b>Executed By</b>			
<b>Date of Execution</b>			

## 9.

<b>Test scenario ID</b>	Unit Test	<b>Test case ID</b>	TU09
<b>Test case description</b>	To verify whether the strip function inside importer.py file is working correctly or not	<b>Test priority</b>	High
<b>Prerequisite</b>	NA	<b>Post-requirement</b>	NA
<b>Test Procedure</b>		1. Have some string to which will be passed to strip function of importer file. 2. Use Assert function for checking whether the string we are getting by applying the strip function of importer file on the string will remove leading and trailing spaces or not.	
<b>Input</b>		Set of Strings	
<b>Expected Result</b>		Pass/Fail based on the conditions	
<b>Actual Result</b>			
<b>Status</b>			
<b>Remarks</b>			
<b>Created By</b>		Hardik Rana	
<b>Date of creation</b>			
<b>Executed By</b>			
<b>Date of Execution</b>			

## 10.

<b>Test scenario ID</b>	Unit Test	<b>Test case ID</b>	TU10
<b>Test case description</b>	To verify whether the validate_datetime function inside importer.py file is working correctly or not	<b>Test priority</b>	High
<b>Prerequisite</b>	NA	<b>Post-requirement</b>	NA
<b>Test Procedure</b>		1. Using Assert function verify if the format of datetime stored is matching with the datetime we are getting by using datetime library of python 2. We can also check if it raises different value error when the datetime is not matching with the given format.	
<b>Input</b>		Set of Strings consisting of date-time	
<b>Expected Result</b>		Pass/Fail based on the conditions	
<b>Actual Result</b>			
<b>Status</b>			
<b>Remarks</b>			
<b>Created By</b>		Hardik Rana	
<b>Date of creation</b>			
<b>Executed By</b>			
<b>Date of Execution</b>			

## 11.

<b>Test scenario ID</b>	Unit Test	<b>Test case ID</b>	TU11
<b>Test case description</b>	To verify whether the validate_boolean function inside importer.py file is working correctly or not	<b>Test priority</b>	High
<b>Prerequisite</b>	Set of boolean flags (True,False)	<b>Post-requirement</b>	NA
<b>Test Procedure</b>		1. Using Assert function pass the boolean flag inside validate function of importer file and check it	
<b>Input</b>		Set of strings	
<b>Expected Result</b>		Pass/Fail based on the conditions	
<b>Actual Result</b>			
<b>Status</b>			
<b>Remarks</b>			
<b>Created By</b>		Hardik Rana	
<b>Date of creation</b>			
<b>Executed By</b>			
<b>Date of Execution</b>			

## 12.

<b>Test scenario ID</b>	Unit Test	<b>Test case ID</b>	TU12
<b>Test case description</b>	To verify the format in which the note is stored	<b>Test priority</b>	High
<b>Prerequisite</b>	NA	<b>Post-requirement</b>	NA
<b>Test Procedure</b>		1. Create a new note entry 2. Use Assert function to check that the various fields of the note are in the correct format	
<b>Input</b>		Name of the repo,Strings in the note	
<b>Expected Result</b>		Pass/Fail based on the conditions	
<b>Actual Result</b>			
<b>Status</b>			
<b>Remarks</b>			
<b>Created By</b>		Hardik Rana	
<b>Date of creation</b>			
<b>Executed By</b>			
<b>Date of Execution</b>			

## 13.

<b>Test scenario ID</b>	Unit Test	<b>Test case ID</b>	TU13
<b>Test case description</b>	To verify if the create_person function inside importer.py file is working properly or not	<b>Test priority</b>	High
<b>Prerequisite</b>	All fields[attributes of person class] which are there in the website should be known	<b>Post-requirement</b>	NA
<b>Test Procedure</b>		1.Take some dummy user fields data and create a model by using on create_person function in importer.py file 2.Use hasattr function of python with Assert to check whether particular attribute belongs to person class or not,and for other attributes check whether that particular attribute is set to what we gave in step1 or not	
<b>Input</b>		Attributes related to person	
<b>Expected Result</b>		Pass/Fail based on the conditions	
<b>Actual Result</b>			
<b>Status</b>			
<b>Remarks</b>			
<b>Created By</b>		Hardik Rana	
<b>Date of creation</b>			
<b>Executed By</b>			
<b>Date of Execution</b>			

## 14.

<b>Test scenario ID</b>	Unit Test	<b>Test case ID</b>	TU14
<b>Test case description</b>	To verify if the import_records function inside importer.py file is working properly or not	<b>Test priority</b>	High
<b>Prerequisite</b>	User should be aware of the parameters passed to the function and return type of function.	<b>Post-requirement</b>	NA
<b>Test Procedure</b>		1.Create dummy record list of different-different persons,some of which contains bad domain,some contains invalid date etc. 2.Call the import_records function by passing this created record list and other necessary parameters and store the results returned by this function in some other list/variables. 3.Use Assert function to check if total written count is matching with what we are expecting and check whether the entries which are expected to be skipped are actually skipped or not and check total count of entries.	
<b>Input</b>		List of some data related to different-different persons	
<b>Expected Result</b>		Pass/Fail based on the conditions	
<b>Actual Result</b>			
<b>Status</b>			
<b>Remarks</b>			

<b>Created By</b>	Hardik Rana
<b>Date of creation</b>	
<b>Executed By</b>	
<b>Date of Execution</b>	

## 15.

<b>Test scenario ID</b>	Unit Test	<b>Test case ID</b>	TU15
<b>Test case description</b>	To verify if the import_records function inside importer.py file is while importing person records with notes also.	<b>Test priority</b>	High
<b>Prerequisite</b>	User should be aware of the parameters passed to the function and return values of function.	<b>Post-requirement</b>	NA
<b>Test Procedure</b>	1.Steps will be the same as what we will do in test-case 14, just one more field note_id will be added. 2.Other steps like calling a function of importer.py file and storing results and comparison will be same as TU14.		
<b>Input</b>	List of some data related to different-different persons		
<b>Expected Result</b>	Pass/Fail based on the conditions		
<b>Actual Result</b>			
<b>Status</b>			
<b>Remarks</b>			

<b>Created By</b>	Hardik Rana
<b>Date of creation</b>	
<b>Executed By</b>	
<b>Date of Execution</b>	

## 16.

<b>Test scenario ID</b>	Unit Test	<b>Test case ID</b>	TU16
<b>Test case description</b>	To verify whether the function rank_and_order inside indexing.py file is working properly or not.	<b>Test priority</b>	High
<b>Prerequisite</b>	User should be aware of the parameters passed to the function and return values of function.	<b>Post-requirement</b>	NA
<b>Test Procedure</b>	1.Create some dummy person records by passing given_name,family_name fields. 2.Call the rank_and_order function by passing the above created list of dummy person lists, Textquery (prefix) you want to check and maximum entries you want in your results and store it in some list. 3.Using Assert check whether the result list you got in step2 is matching with what you are expecting or not.		
<b>Input</b>	List of some data related to different-different persons		
<b>Expected Result</b>	Pass/Fail based on the conditions		
<b>Actual Result</b>			

<b>Status</b>	
<b>Remarks</b>	
<b>Created By</b>	Hardik Rana
<b>Date of creation</b>	
<b>Executed By</b>	
<b>Date of Execution</b>	

## 17.

<b>Test scenario ID</b>	Unit Test	<b>Test case ID</b>	TU17
<b>Test case description</b>	To verify whether the function rank_and_order inside indexing.py file is working properly or not if given_name or family_name is given as a concatenation of more than one words.	<b>Test priority</b>	High
<b>Prerequisite</b>	User should be aware of the parameters passed to the function and return values of function.	<b>Post-requirement</b>	NA
<b>Test Procedure</b>	1. Same as step1 of test-case 20, but this time add entries which contains family_name or given_name as a concatenation of more than one words. 2. Calling the function and comparing results steps will be the same as what we will do in test-case 20.		
<b>Input</b>	List of some data related to		

	different-different persons [In which for entries given_name or family_name should contain more than one words]
<b>Expected Result</b>	Pass/Fail based on the conditions
<b>Actual Result</b>	
<b>Status</b>	
<b>Remarks</b>	
<b>Created By</b>	Hardik Rana
<b>Date of creation</b>	
<b>Executed By</b>	
<b>Date of Execution</b>	

## 18.

<b>Test scenario ID</b>	Unit Test	<b>Test case ID</b>	TU18
<b>Test case description</b>	To verify whether the function sort_query_words inside indexing.py file is working properly or not.	<b>Test priority</b>	High
<b>Prerequisite</b>	User should be aware of the parameters passed to the function and return values of function.	<b>Post-requirement</b>	NA
<b>Test Procedure</b>		1.Take list of different-different words. 2.Use Assert function and check whether the results we are getting by passing this lists to sort_query_words function is matching with our expectation results or not	

<b>Input</b>	List of different-different words. [Which can be used to check sort by length,sort by popularity functionalities]
<b>Expected Result</b>	Pass/Fail based on the conditions
<b>Actual Result</b>	
<b>Status</b>	
<b>Remarks</b>	
<b>Created By</b>	Hardik Rana
<b>Date of creation</b>	
<b>Executed By</b>	
<b>Date of Execution</b>	

## 19.

<b>Test scenario ID</b>	Unit Test	<b>Test case ID</b>	TU19
<b>Test case description</b>	To verify if empty TextQuery is passed to search function inside indexing.py,it will give expected results or not [regression test]	<b>Test priority</b>	High
<b>Prerequisite</b>	User should be aware of the parameters passed to the function and return values of search function.	<b>Post-requirement</b>	NA
<b>Test Procedure</b>	1.Use Assert function and check if the results we are getting by passing empty TextQuery to search function is an empty list or not		

<b>Input</b>	None
<b>Expected Result</b>	Pass/Fail based on the conditions
<b>Actual Result</b>	
<b>Status</b>	
<b>Remarks</b>	
<b>Created By</b>	Hardik Rana
<b>Date of creation</b>	
<b>Executed By</b>	
<b>Date of Execution</b>	

## 20.

<b>Test scenario ID</b>	Unit Test	<b>Test case ID</b>	TU20
<b>Test case description</b>	To verify if the get_repo_and_action function inside main.py file is working properly or not	<b>Test priority</b>	High
<b>Prerequisite</b>	User should be aware of the parameters passed to the function and return values of get_repo_and_action function.	<b>Post-requirement</b>	NA
<b>Test Procedure</b>	1.Use Assert function and check if the results we are getting by passing some request to get_repo_and_action function is matching with what we are expecting or not		
<b>Input</b>	String consisting URL		

<b>Expected Result</b>	Pass/Fail based on the conditions
<b>Actual Result</b>	
<b>Status</b>	
<b>Remarks</b>	
<b>Created By</b>	Hardik Rana
<b>Date of creation</b>	
<b>Executed By</b>	
<b>Date of Execution</b>	

## 21.

<b>Test scenario ID</b>	Unit Test	<b>Test case ID</b>	TU21
<b>Test case description</b>	To verify whether there are bad characters in the lang parameter or not [By using env function of main.py to construct 'env' object]	<b>Test priority</b>	High
<b>Prerequisite</b>	NA	<b>Post-requirement</b>	NA
<b>Test Procedure</b>	1.Get the request path and construct a webapp.Request object. 2. Apply setup_env function of main.py file on the above created webapp.Request object and get the env object. 3.Using Assert to check whether the env object contains any bad characters		
<b>Input</b>	String consisting of request path		
<b>Expected Result</b>	Pass/Fail based on the conditions		
<b>Actual Result</b>			

<b>Status</b>	
<b>Remarks</b>	
<b>Created By</b>	Hardik Rana
<b>Date of creation</b>	
<b>Executed By</b>	
<b>Date of Execution</b>	

## 22.

<b>Test scenario ID</b>	Unit Test	<b>Test case ID</b>	TU22
<b>Test case description</b>	To verify whether the language_menu_options[0] can be used as the default	<b>Test priority</b>	High
<b>Prerequisite</b>	NA	<b>Post-requirement</b>	NA
<b>Test Procedure</b>		1.Get the request path and construct a webapp.Request object. 2.Set different language_menu_options usin set_for_repo function of config.py file. 3.Use Assert to check whether first language can be used as the default or not	
<b>Input</b>		list of language_menu_options which will be passed to set_for_repo function.	
<b>Expected Result</b>		Pass/Fail based on the conditions	
<b>Actual Result</b>			
<b>Status</b>			
<b>Remarks</b>			
<b>Created By</b>		Hardik Rana	
<b>Date of creation</b>			

<b>Executed By</b>	
<b>Date of Execution</b>	

## 23.

<b>Test scenario ID</b>	Unit Test	<b>Test case ID</b>	TU23
<b>Test case description</b>	To verify whether Content Security Policy(CSP) is set when the React UI is enabled.	<b>Test priority</b>	High
<b>Prerequisite</b>	NA	<b>Post-requirement</b>	NA
<b>Test Procedure</b>	1.Create response from webapp.response() library and handler. 2.Use Assert function to verify whether CSP is there in the response's header or not.		
<b>Input</b>	None		
<b>Expected Result</b>	Pass/Fail based on the conditions		
<b>Actual Result</b>			
<b>Status</b>			
<b>Remarks</b>			
<b>Created By</b>	Hardik Rana		
<b>Date of creation</b>			
<b>Executed By</b>			
<b>Date of Execution</b>			

## 24.

<b>Test scenario ID</b>	Unit Test	<b>Test case ID</b>	TU24
<b>Test case description</b>	To verify whether the function convert_description_to_other [which converts description in PFIF 1.4 format to other older version] in pfif.py file is working properly or not.	<b>Test priority</b>	High
<b>Prerequisite</b>	User should be aware of the parameters passed to the function and return values of function to be tested	<b>Post-requirement</b>	NA
<b>Test Procedure</b>		1.Use Assert function to check whether the result we are getting by passing some string to convert_description_to_other function is matching with what we are expecting or not.	
<b>Input</b>		Strings which will be passed as a parameter to function	
<b>Expected Result</b>		Pass/Fail based on the conditions	
<b>Actual Result</b>			
<b>Status</b>			
<b>Remarks</b>			
<b>Created By</b>		Hardik Rana	
<b>Date of creation</b>			
<b>Executed By</b>			

<b>Date of Execution</b>	
--------------------------	--

25.

<b>Test scenario ID</b>	Unit Test	<b>Test case ID</b>	TU25
<b>Test case description</b>	To verify whether the function maybe_convert_other_to_description [Converts 'other' in PFIF 1.3 and earlier to 'description' in PFIF 1.4 if 'other' has only 'description' field. Otherwise it returns 'other' without 'other' has only 'description' field. Otherwise it returns 'other' without] in pfif.py file is working properly or not.	<b>Test priority</b>	High
<b>Prerequisite</b>	User should be aware of the parameters passed to the function and return values of function to be tested	<b>Post-requirement</b>	NA
<b>Test Procedure</b>		1.Use Assert function to check whether the result we are getting by passing some string to maybe_convert_other_to_description function is matching with what we are expecting or not.	
<b>Input</b>		None	

<b>Expected Result</b>	Pass/Fail based on the conditions
<b>Actual Result</b>	
<b>Status</b>	
<b>Remarks</b>	
<b>Created By</b>	Hardik Rana
<b>Date of creation</b>	
<b>Executed By</b>	
<b>Date of Execution</b>	

## 26.

<b>Test scenario ID</b>	Unit Test	<b>Test case ID</b>	TU26
<b>Test case description</b>	To verify parsing of an XML file for each test case.	<b>Test priority</b>	High
<b>Prerequisite</b>	NA	<b>Post-requirement</b>	NA
<b>Test Procedure</b>	1.Create person_records, note_records by passing test_case.xml file to parse_file function of pfif.py file 2.Use Assert to verify the person_records and note_records we got are matching with the expected results or not		
<b>Input</b>	None		
<b>Expected Result</b>	Pass/Fail based on the conditions		
<b>Actual Result</b>			
<b>Status</b>			
<b>Remarks</b>			
<b>Created By</b>	Hardik Rana		
<b>Date of creation</b>			

<b>Executed By</b>	
<b>Date of Execution</b>	

## 27.

<b>Test scenario ID</b>	Unit Test	<b>Test case ID</b>	TU27
<b>Test case description</b>	To verify whether test data is cached in ram or not	<b>Test priority</b>	High
<b>Prerequisite</b>	User should be aware of the parameters passed to the function and return values of function which will be used	<b>Post-requirement</b>	NA
<b>Test Procedure</b>		1.Create an instance of cache by using RamCache() class. 2.Put some data (key,value and ttl)in cache by using put function of RamCache() class. 3.Using Assert function check whether by passing key to get function of RamCache() class you are getting its associated value or not.	
<b>Input</b>		None	
<b>Expected Result</b>		Pass/Fail based on the conditions	
<b>Actual Result</b>			
<b>Status</b>			
<b>Remarks</b>			
<b>Created By</b>		Hardik Rana	
<b>Date of creation</b>			
<b>Executed By</b>			

<b>Date of Execution</b>	
--------------------------	--

## 28.

<b>Test scenario ID</b>	Unit Test	<b>Test case ID</b>	TU28
<b>Test case description</b>	To verify that test data for which ttl (time to leave) set to 0 will not be cached in ram	<b>Test priority</b>	High
<b>Prerequisite</b>	User should be aware of the parameters passed to the function and return values of function which will be used	<b>Post-requirement</b>	NA
<b>Test Procedure</b>		1.Create an instance of cache by using RamCache() class. 2.Put some data (key,value and ttl=0)in cache by using put function of RamCache() class. 3.Using Assert function check whether by passing key to get function of RamCache() class you are getting None or not	
<b>Input</b>		None	
<b>Expected Result</b>		Pass/Fail based on the conditions	
<b>Actual Result</b>			
<b>Status</b>			
<b>Remarks</b>			
<b>Created By</b>		Hardik Rana	
<b>Date of creation</b>			
<b>Executed By</b>			

Date of Execution	
-------------------	--

## 29.

Test scenario ID	Unit Test	Test case ID	TU29
Test case description	To verify whether this cached data expires after ttl or not	Test priority	High
Prerequisite	User should be aware of the parameters passed to the function and return values of function which will be used	Post-requirement	NA
Test Procedure		1.Create an instance of cache by using RamCache() class. 2.Put some data (key,value and ttl)in cache by using put function of RamCache() class. 3.Using Assert function before and after expiration of ttl to check whether you are getting value or not.	
Input		None	
Expected Result		Pass/Fail based on the conditions	
Actual Result			
Status			
Remarks			
Created By		Hardik Rana	
Date of creation

## 30.

<b>Test scenario ID</b>	Unit Test	<b>Test case ID</b>	TU30
<b>Test case description</b>	To check whether the clear function to clear the cache is working properly or not	<b>Test priority</b>	High
<b>Prerequisite</b>	User should be aware of the parameters passed to the function and return values of function which will be used	<b>Post-requirement</b>	NA
<b>Test Procedure</b>		1.Create an instance of cache by using RamCache() class. 2.Put some data (key,value and ttl)in cache by using put function of RamCache() class. 3.Using Assert function before and after cache and compare both results	
<b>Input</b>		None	
<b>Expected Result</b>		Pass/Fail based on the conditions	
<b>Actual Result</b>			
<b>Status</b>			
<b>Remarks</b>			
<b>Created By</b>		Hardik Rana	
<b>Date of creation</b>			
<b>Executed By</b>

## 31.

<b>Test scenario ID</b>	Unit Test	<b>Test case ID</b>	TU31
<b>Test case description</b>	To verify whether the get function inside Resources class of resources.py function is working properly or not. [To verify whether Resources.get fetches a Resource from the datastore]	<b>Test priority</b>	High
<b>Prerequisite</b>	User should be aware of the parameters passed to the function and return values of function which will be used	<b>Post-requirement</b>	NA
<b>Test Procedure</b>		1.First create a function that will put a resource in datastore for testing. 2. After that with the use of Assert function we can check whether that resources is there or not. [We can also write delete function and assert to check after that]	
<b>Input</b>		None	
<b>Expected Result</b>		Pass/Fail based on the conditions	
<b>Actual Result</b>			
<b>Status</b>			
<b>Remarks</b>			
<b>Created By</b>		Hardik Rana	
<b>Date of creation</b>			
<b>Executed By</b>

-------------------	--

## 32.

Test scenario ID	Unit Test	Test case ID	TU32
Test case description	To verify whether the set_active_bundle_name function inside resources.py function is working properly or not.	Test priority	High
Prerequisite	User should be aware of the parameters passed to the function and return values of function which will be used	Post-requirement	NA
Test Procedure		1.First create a function that will put a resource in datastore for testing. 2.Check the results of Assert function used with get_localized and get_rendered before and after the set_active_bundle_name function is used	
Input		None	
Expected Result		Pass/Fail based on the conditions	
Actual Result			
Status			
Remarks			
Created By		Hardik Rana
